About NetMass

In 1998, NetMass helped to pioneer the market for online data protection. NetMass data solutions now help thousands of businesses of all sizes protect their data through flexible and economical business continuity and disaster recovery solutions.

NetMass, the safe data company, delivers online backup, remote server backup for distributed environments, data archiving, online data storage, file sharing and more. NetMass has customers and partners around the U.S. and the world, and has offices in Dallas and Houston. Please visit us on the web at www.netmass.com for more information.

NETMASS
The Safe Data Company

Software and Technologies

NetMass has forged working partnerships with a number of the world's most highly-regarded technology companies to bring you the most reliable, industry-proven solutions available. We have taken great care to ensure that your important data is handled by the best software and technologies available.

NetMass continues to improve and extend our data protection services by providing secure and reliable technology with all of our solutions. We offer a full range of data backup, restoration, online storage and collaboration services. We want to be your reliable partner in today's world where information and data are indispensable and irreplaceable.

Data Center Infrastructure

Our client data is stored at world-class data centers in highly secured offsite locations, one of which is the InfoMart, a landmark facility and a true enterprise-class data recovery center (pictured below) with extraordinary infrastructure and network connectivity. These state-of-the-art facilities with numerous redundancies, rock-solid security and with access to more than a dozen fibre optic networks uniquely suit the needs of our demanding clients.

Send a backup copy of your critical data offsite to world-class facilities that are temperature-controlled, disaster-hardened and offer exceptional business continuity.

ServerSafe For Windows Servers, Linux, Unix, Solaris Servers, AS400, Netware, SQL

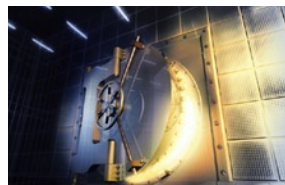

ServerSafe delivers the most advanced, multi-site and multi-platform internet-based backup system available. Get the latest in security and reliability with centralized and automated backup of file servers and application/database servers with secure offsite storage and immediate online restoration. ServerSafe supports backing up open files and databases on multi-platforms, providing ideal support for existing CRM and ERP systems. ServerSafe is also compliant with new regulations mandated by Sarbanes-Oxley, HIPAA, SEC Rule 17a and others. *Get the productivity advantage of seamless backup and restore across your network.*

SystemSafe Online Backup for Desktops, Laptops, File Servers on Windows OS

SystemSafe gives individuals and businesses a simple-to-use, economical backup and data recovery solution to protect their most valuable asset – their data. This industry-leading application makes it easy for any person or organization to have a powerful offsite backup solution and business continuity plan. Seamlessly protect valuable data from potential catastrophes for pennies per day. The SystemSafe backup solution is entirely automated and *does not require additional hardware* since your data is backed up securely over the internet to our world-class data center facilities.

Additional services include monthly Data Archiving, Data on Demand.

Virtual Storage Store files online and access them from any internet connection

Virtual Storage enables you (and your team) to store, share, access and manage files over the internet in one central location – *our secure data centers*. This advanced internet storage is used just like a local hard drive or network drive on your local computer. Never again worry about copying data to removable storage devices or attaching large files to email. With Virtual Storage, your data is secure and easily accessible from any internet-connected computer *for efficient 24/7 access*.

*An additional service to Virtual Storage is **Teamworking**, a multi-user access capability that offers advanced collaboration features among team members, including folder sharing, file locking and file versioning.*
